

SAMplicity 365 Standard

Effectively managing your Microsoft 365 subscriptions can be challenging. Whilst Microsoft provide reports that are packed full of information, it is never 100% clear which ones are best to pull, and which fields can be trusted.

With EasySAM's SAMplicity 365 services (powered by [Smarter365](#)), all the relevant information is pulled and collated into clear workspaces for you. Our Standard service includes a **validation exercise** against an unlimited number of user-aligned databases; as well as a **duplication report** that highlights not only users with multiple accounts with duplicated features, but even users with different email domain assignments too.

You'll be able to quickly identify:

- ❖ Unused/inactive accounts for re-harvest/true-down
- ❖ Subscribers aligned with the wrong subscription/suite
- ❖ Duplicate user provisions against multiple tenancies
- ❖ Poor product adoption across the business
- ❖ Training requirements for users not using full functionality

Setup is quick and easy, only requiring around 15-30 minutes of your time; and data will be available to start working on together very shortly after.

If you require something more comprehensive, please take a look at our Pro and Premium variations of the service.
