EASYSAM

SAMplicity Cloud

Whether you are considering migrating to the cloud or you have already started that journey but found it more difficult than expected, then our Cloud Ready service is for you.

We've got three distinct offerings for you to choose from:

SAMplicity Cloud Ready - for Microsoft

Mainly orientated around platforms like Azure and Amazon Web Services, this service is frequently launched prior to a migration project; whilst things are in the planning stage. It includes a review of:

- Infrastructure Right-Sizing
- Hybrid Use Rights
- SQL Database Consolidation

SAMplicity Cloud Ready - for Multiple Vendors

A multi-vendor engagement typically focuses on compliance. Whilst Microsoft's licensing and cross-platform benefits are more easily accessible, it's imperative to also consider the licensing implications of other vendors. We'll help you with the following hosting legalities:

- No allowance
- Limited permission
- Rights that alter the cost or conditions of the agreement

This service is priced per application and will guarantee written confirmation of these allowances/restrictions ahead of any migration.

IaaS Platform Review

Whilst due diligence is often done as part of the 'Cloud-Ready' phase; SaaS environments like Azure can easily run out of control and become overwhelming very quickly. Our review ensures that any gaps are addressed; with infrastructure sizing and uptime scrutinised - ensuring phantom expenses are nullified and that you aren't signing off more than you need.
