EASYSAM

SAMplicity Tool Check

Frustration with inventory and SAM tools is something that comes up frequently in conversation for us. On the flip side, it isn't often we have an engagement with an end user where we don't flag gaps in their associated data – even for those that are pleased with their tool of choice. It is for this reason that we offer SAMplicity Tool Check.

We highly recommend this service to not only validate the effectiveness of a tool currently in place (after all, you only know what you know); but also for organisations thinking of making the time-consuming (and potentially expensive) jump to another platform.

During the project, you'll receive a full estate review including:

Estate Coverage/Visibility

Get a true picture of how well your devices are being covered by your chosen tool(s).

Missing Key Datapoints

Including blank entries for things like operating systems, makes, models and serial numbers.

Inactivity Investigation

Does a device no longer exist, or is there a bigger problem that needs resolving?

Incorrect Media Deployment

Mistakes happen, but we'll be there to make sure they don't leave you vulnerable.

Power BI Dashboard

All of our findings in an easily digestible format that can be shared across the business.

The service is quick, comprehensive and low touch - allowing you to highlight business wins easily without breaking the bank.

Why not contact us today to do a health screening for your ailing systems?
